SAFE SURGERY: PREVENTIVE ACTIONS OF THE PREDISPONENT FACTORS OF SURGICAL SITE INFECTION

**Introduction:** Surgical procedures are performed daily around the world, and clients may be subject to adverse events, as well as an infectious process. **Objective:** To identify factors associated with Surgical Site Infection (ISC), as well as to propose safe practices in preventing these events. **Methodology:** LILACS and SCIELO electronic databases on the subject. **Results:** Surgical Site Infection (ISC) remains one of the main risks to patient safety in health services in Brazil. **Final considerations:** Therefore, it is of the utmost importance that the professionals...
who work in the Surgical and Sterile Material Central Center (CM E), act with preventive strategies for the implementation of safe practices to avoid Surgical Site Infections (SSI).
